

Test Suite: Student Registration Form

Application: Student Registration Form

Test Suite: Practice Form

Testing Type: Functional, UI, Validation, Negative Testing

TC_01 — Verify Student Registration Form

Test Case ID: TC_01

Title: Verify Student Registration Form UI and Required Elements

Priority: High

Test Type: UI / Functional

Precondition:

The user must be on the Student Registration Form page.

Test Steps:

1. Navigate to the Student Registration Form.
2. Verify the page title.
3. Verify that all expected form fields and labels are displayed.
4. Verify that the Submit button is visible and enabled.
5. Check the overall page layout for visual or alignment issues.

Expected Results:

- The page title "**Student Registration Form**" is displayed correctly.
- The following form elements are visible and properly labeled:
 - First Name
 - Last Name
 - Email
 - Gender
 - Mobile Number
 - Date of Birth
 - Subjects
 - Hobbies
 - Picture
 - Current Address
 - State
 - City
- The **Submit** button is visible and enabled.

- Form elements are properly aligned and do not overlap.
 - No broken images, missing elements, or obvious layout issues are present.
-

TC_02 — Verify Gender Radio Buttons

Test Case ID: TC_02

Title: Verify Gender Radio Button Selection

Priority: High

Test Type: Functional / UI

Precondition:

The user must be on the Student Registration Form page.

Test Steps:

1. Navigate to the Student Registration Form.
2. Locate the Gender field.
3. Select **Male**.
4. Verify the selected state.
5. Select **Female**.
6. Verify the selected state.
7. Select **Other**.
8. Verify the selected state.

Expected Results:

- All available gender options are displayed.
 - User can select a gender option using the radio button.
 - Only **one gender option** can be selected at a time.
 - Selecting a new option automatically deselects the previously selected option.
 - The selected radio button displays the appropriate selected-state indicator.
-

TC_03 — Verify Date of Birth Default Value

Test Case ID: TC_03

Title: Verify Date of Birth Field Default Value

Priority: Medium

Test Type: Functional / UI

Precondition:

The user must be on the Student Registration Form page.

Test Steps:

1. Navigate to the Student Registration Form.
2. Locate the Date of Birth field.
3. Check the default value displayed in the field.

Expected Results:

- The Date of Birth field displays the expected default date value.
- The displayed date follows the expected date format.
- The date field is accessible and editable if editing is supported.

Note: If the application is specifically designed to default to the current date, state that explicitly as the requirement. Otherwise, avoid assuming that today's date is the expected value.

TC_04 — Verify Hobbies Checkboxes

Test Case ID: TC_04

Title: Verify Hobbies Checkbox Selection

Priority: Medium

Test Type: Functional / UI

Precondition:

User is on the Student Registration Form page.

Test Steps:

1. Navigate to the Student Registration Form.
2. Locate the Hobbies field.
3. Select **Sports**.
4. Select **Reading**.
5. Select **Music**.
6. Deselect one of the selected options.

Expected Results:

- All available hobby options are displayed.
- User can select one or multiple hobby options.
- Multiple checkboxes can remain selected simultaneously.
- User can deselect a previously selected option.
- Each selected checkbox displays the appropriate selected-state indicator.

TC_05 — Verify Successful Form Submission

Test Case ID: TC_05

Title: Verify Successful Student Registration Form Submission

Priority: Critical

Test Type: Functional / Positive

Precondition:

The user must be on the Student Registration Form page and has valid data available for all required fields.

Test Steps:

1. Navigate to the Student Registration Form.
2. Enter valid values into the required fields.
3. Enter valid values into optional fields where applicable.
4. Upload a valid profile picture.
5. Select a State.
6. Select a City.
7. Click the **Submit** button.

Expected Results:

- Users can enter valid data into the available form fields.
- Required fields accept valid input.
- Users can upload a supported image file successfully.
- Users can select a State from the dropdown.
- Users can select a City from the available options.
- The form is submitted successfully.
- A confirmation modal is displayed with the message:
"Thanks for submitting the form"
- The submitted information is displayed correctly in the confirmation details.
- No validation errors are displayed when all required information is valid.

TC_06 — Verify Submission with Empty Required Fields

Test Case ID: TC_06

Title: Verify Required Field Validation

Priority: Critical

Test Type: Negative / Validation

Precondition:

The user must be on the Student Registration Form page and all required fields are empty.

Test Steps:

1. Navigate to the Student Registration Form.
2. Leave all required fields empty.
3. Click the **Submit** button.

Expected Results:

- The form should not be submitted.
 - Users should remain on the registration form.
 - Required fields should display their validation state.
 - Appropriate validation messages or visual indicators should be displayed for missing required fields.
 - Required fields such as First Name, Last Name, Gender, and Mobile Number should be identified as invalid.
-

TC_07 — Verify Invalid Email Validation

Test Case ID: TC_07

Title: Verify Email Field Rejects Invalid Email Addresses

Priority: High

Test Type: Negative / Validation

Precondition:

The user must be on the Student Registration Form page.

Test Data:**Invalid Email**

test@com

testing123

test\$google.com

Test Steps:

1. Navigate to the Student Registration Form.
2. Enter an invalid email address into the Email field.
3. Attempt to submit the form or move focus away from the field.
4. Repeat the test using each invalid email value.

Expected Results:

- The Email field identifies the invalid input.
 - An appropriate validation message is displayed.
 - The form should not accept the invalid email address as valid.
 - The user is prompted to enter a valid email address.
-

TC_08 — Verify Invalid Mobile Number Validation

Test Case ID: TC_08

Title: Verify Mobile Number Field Validation

Priority: High

Test Type: Negative / Validation

Precondition:

The user must be on the Student Registration Form page.

Test Data:

- Alphabetic characters
- Special characters
- Fewer than 10 digits
- More than 10 digits
- Alphanumeric values

Test Steps:

1. Navigate to the Student Registration Form.
2. Locate the Mobile Number field.
3. Enter alphabetic characters.
4. Enter special characters.
5. Enter a number with fewer than 10 digits.
6. Enter a number with more than 10 digits.
7. Attempt to submit the form.

Expected Results:

- The Mobile Number field accepts only valid mobile number input according to the application's requirements.
- Alphabetic and unsupported special characters are rejected or trigger validation.
- Values that do not meet the required 10-digit format are rejected.
- An appropriate validation message or visual indicator is displayed for invalid input.
- The form cannot be successfully submitted while the Mobile Number field contains invalid data.
